DETAILED ACTION

Election/Restrictions

Note: The examiner does not find claims 10 and 11 read on the elected species 24 due to claim 10 recited "the distal tapered section including a coil having a tapered profile and" and claim 11 recited "the distal tapered section including ribs extending generally perpendicular to a longitudinal axis of the distal tapered section".

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 6, and 13-28 are rejected under 35 U.S.C. 102(b) as being anticipated by Nott et al. (U.S. 6,013,093).

Nott et al discloses the claimed invention in figures 5, 5A, and 7, an elongated member (134) having a first end portion configured to extend exterior of the body lumen; a body (10,170) attached to the second end portion of the elongate member (134); a pair of rib members (drawing below) extending distally from the elongate body (134) and branching into a pair of proximal ring members (drawing below); wherein each proximal ring member branching into pairs of distal ring members (at 184,186) to thereby define pairs of adjacent distal ring members (at 184,186) converging into a plurality of single members (176) which converge to define a distal end of the body and furthermore, wherein the proximal ring

members are connected to the distal ring members (184,186) via plurality of links (shown drawing below).

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Dormia (U.S. 4,347,846).

Dormia discloses substantially as claimed in figures 1-3, an elongated member (2,3) having a first end portion configured to extend exterior of the body lumen; a body (8) attached to the second end portion of the elongate member (2,3) and wherein the body (8) including proximal and distal portion and midsection.

Response to Arguments

Applicant's arguments filed 07/02/2007 have been fully considered but they are not persuasive. With respect to claims 1, 6, and 13-28, According to applicant, Nott patent does not disclose body (10) neither attached nor connected to the elongated member (pusher 134). This is simply not convincing, giving their broadest reasonable interpretation Nott patent as shown in figure 5 and col. 7, lines 54-66, the body (10) is considered connected or attached to the elongated member (134) when delivery the filter (10) in the lumen of the vessel and furthermore, the filter as described by Dormia patent considered having a substructure that absorbs forces applied to the body of the elongated member as recited in claim 1. As least for these reasons, the Examiner disagrees with Applicant's remarks and has maintained the grounds of rejection under 35 U.S.C. 102 (b) as being anticipated by Nott et al '093 and Dormia '846 for the reasons as set forth in the previous office action.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
